# Cardiopatías genéticas

Ximena Marques J.  
Programa de especialización  
Medicina Materno Fetal  
Tutor Catherine Díaz

# Hoja de Ruta

- Embriología
- Epidemiología - Etiología
- Cardiopatías sindrómicas: fenotipo prenatal y cardiopatías asociadas a:
  - Aneuploidías
  - CNV
  - SNV
  - Otros

# Formación del tubo cardíaco primitivo

## Aorta y Tronco Pulmonar

Región lisa de VD – Cono Arterial  
Región Lisa de VI – vestíbulo Ao

Región trabeculada de VD y VI

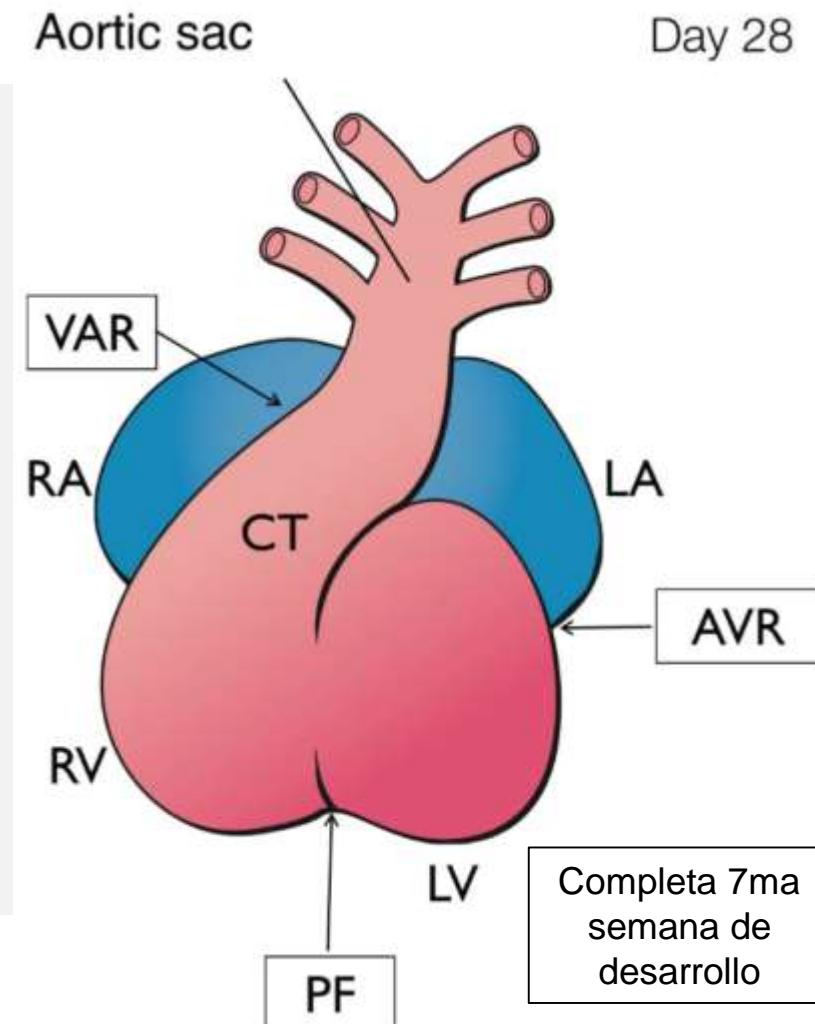

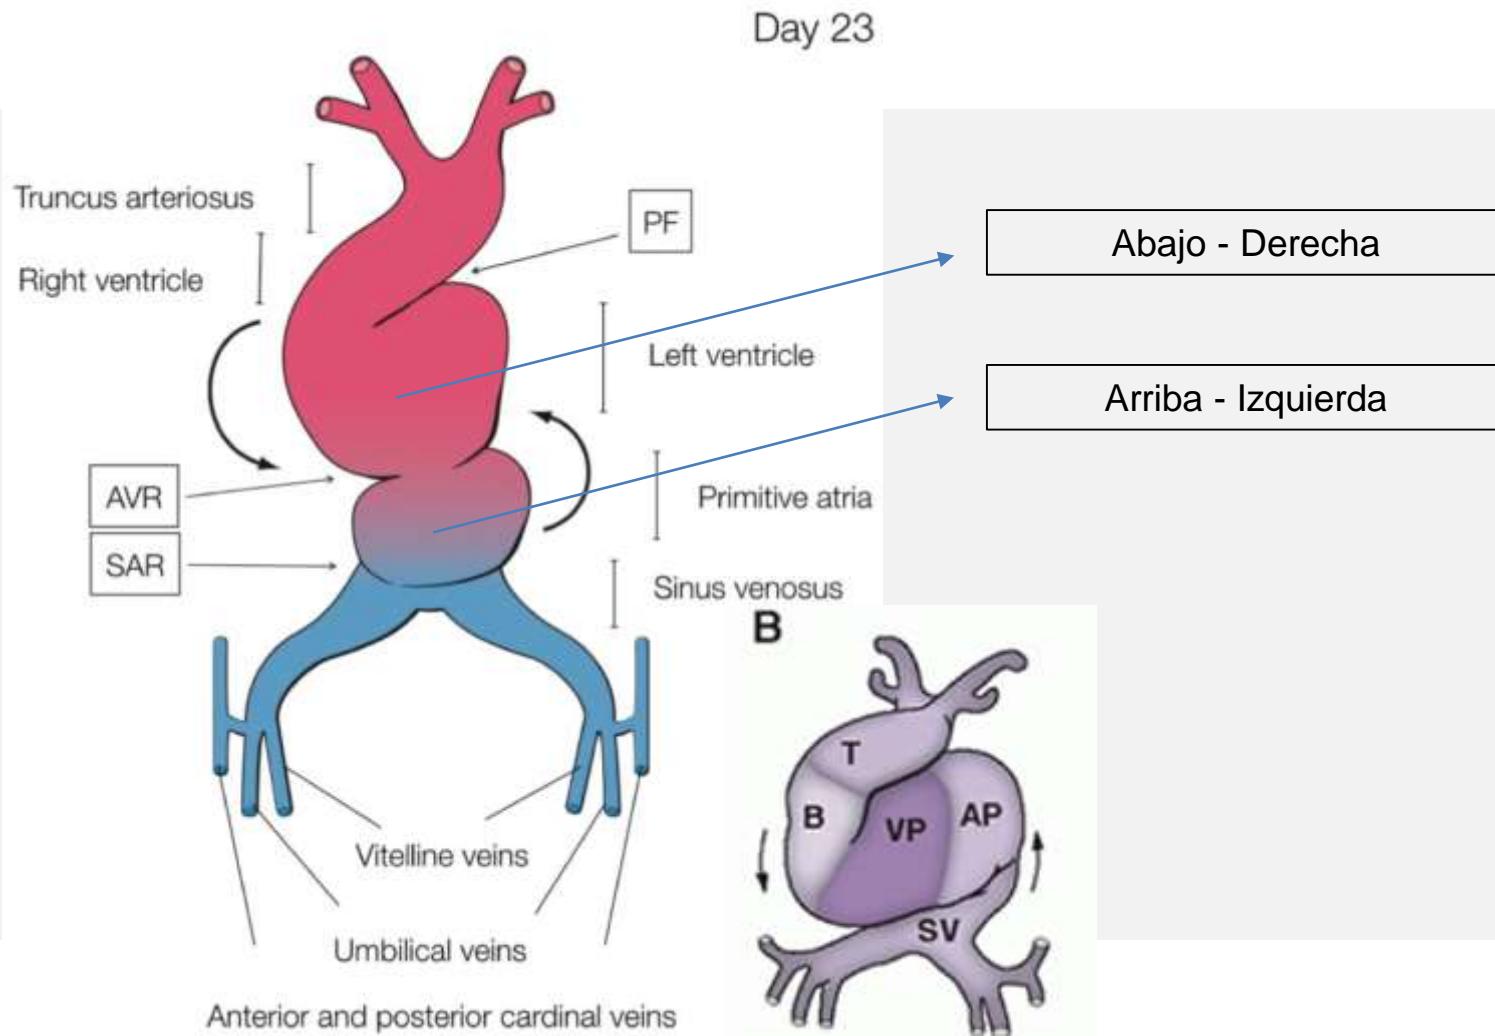

Región trabeculada AD y AI

Región Lisa de AD  
Sinus Venarum (VP)  
Seno coronario

El desarrollo cardíaco se inicia durante la gastrulación al final de la 2da semana del desarrollo (Carnegie 7)

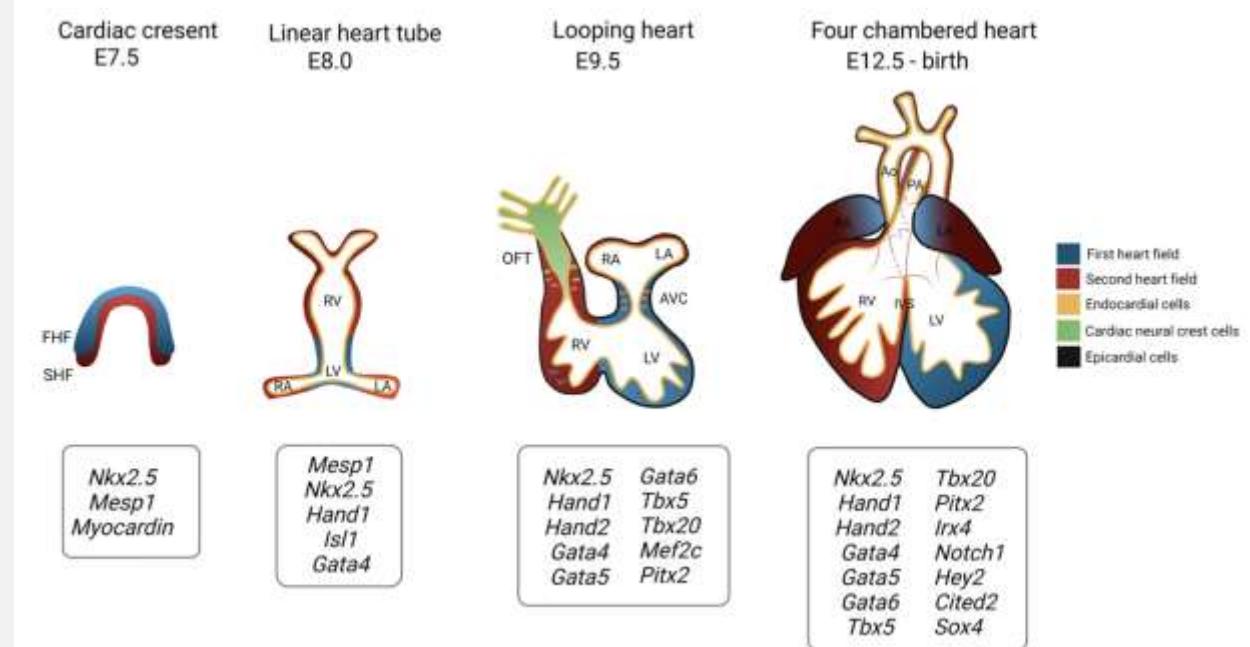

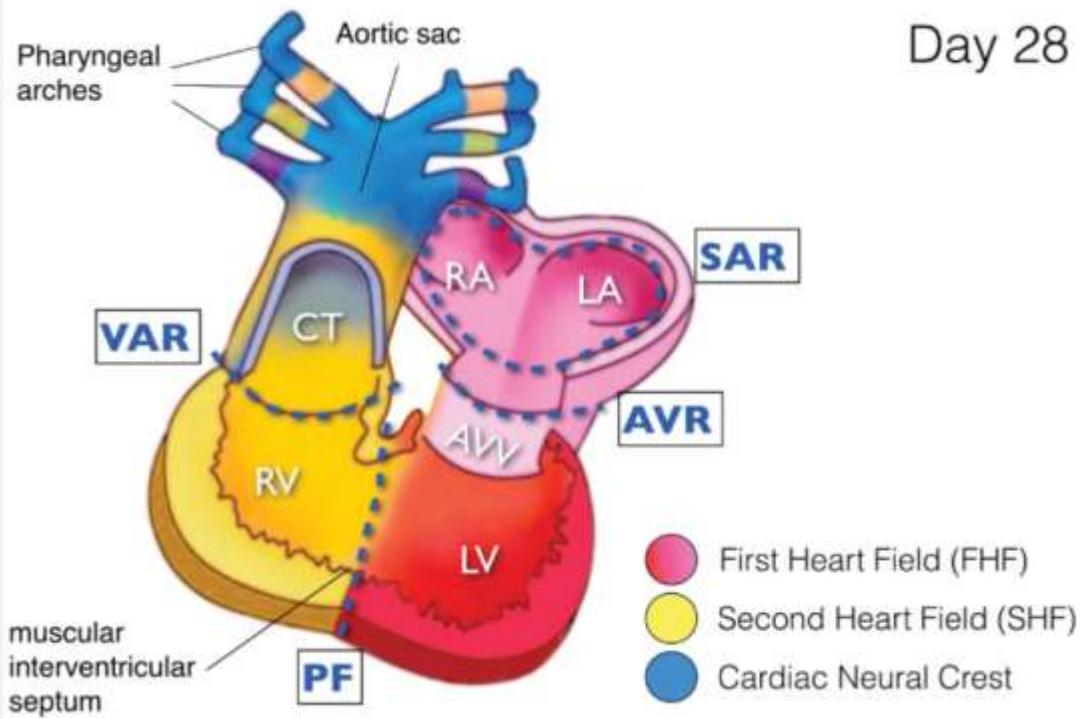

# Plegamiento - Septación

Al comienzo de la 4ta semana de desarrollo (EC)10 el tubo recto comienza su plegamiento

# Campos cardíacos

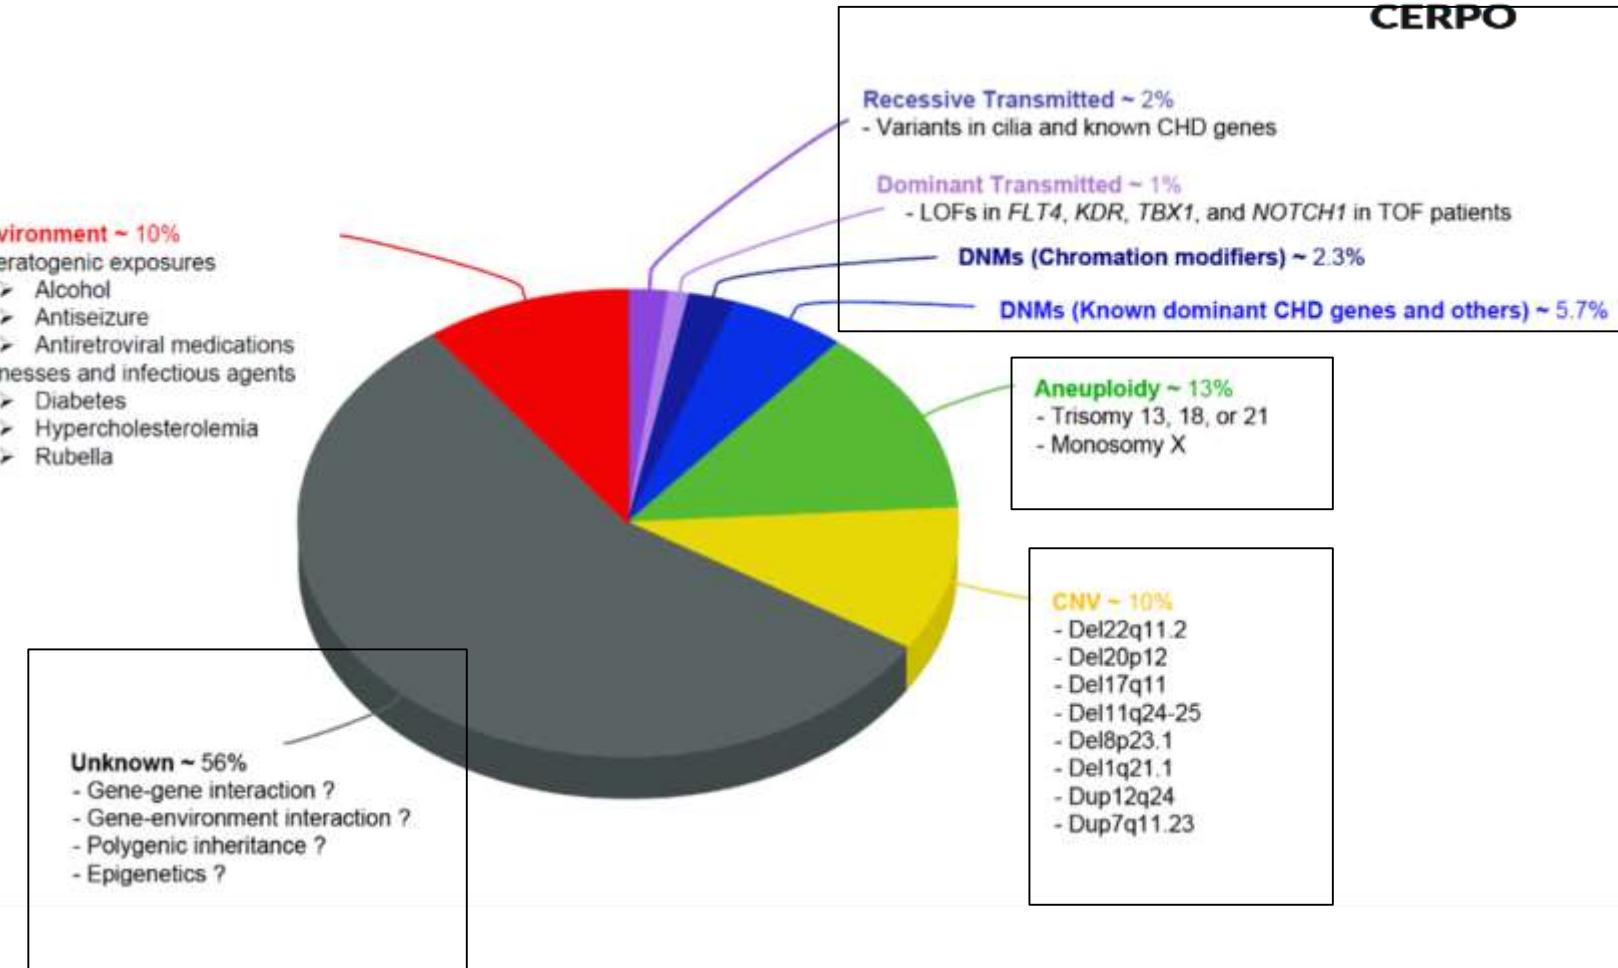

Cresta neural: base del septo atrial, sistema de conducción y tractos de salida

Disrupción de la diferenciación embrionaria y cardiogénesis resulta en CC  
Ambos procesos regulados por distintos genes y sus productos

# Epidemiología

- Las CC afectan al 1% de los RNV.
- Primeros estudios de recurrencia familiar 16% vs 1-2% (Dr. Ruth Whittemore. Yale)
- Grandes estudios poblaciones NGS.

# Aneuploidías

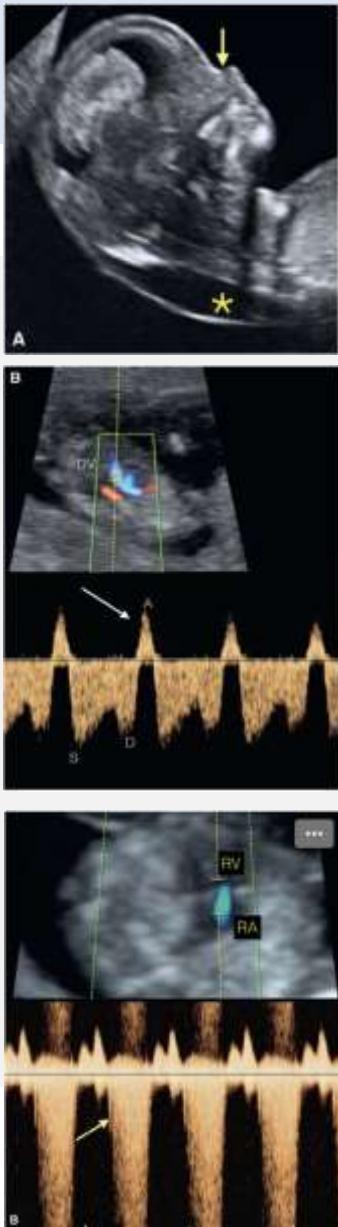

Trisomía 21  
Trisomía 18  
Trisomía 13  
Síndrome de Turner  
Síndrome Cat Eye

# Trisomías 21,18 y 13

# Síndrome de Turner

Prevalencia de 1: 2000 a 2500 mujeres nacidas vivas

Etiología: La pérdida parcial o total del 2do cromosoma sexual.

- No disyunción en la meiosis paterna.
- No disyunción mitótica postcigótica

El riesgo del síndrome de Turner no cambia con la edad materna

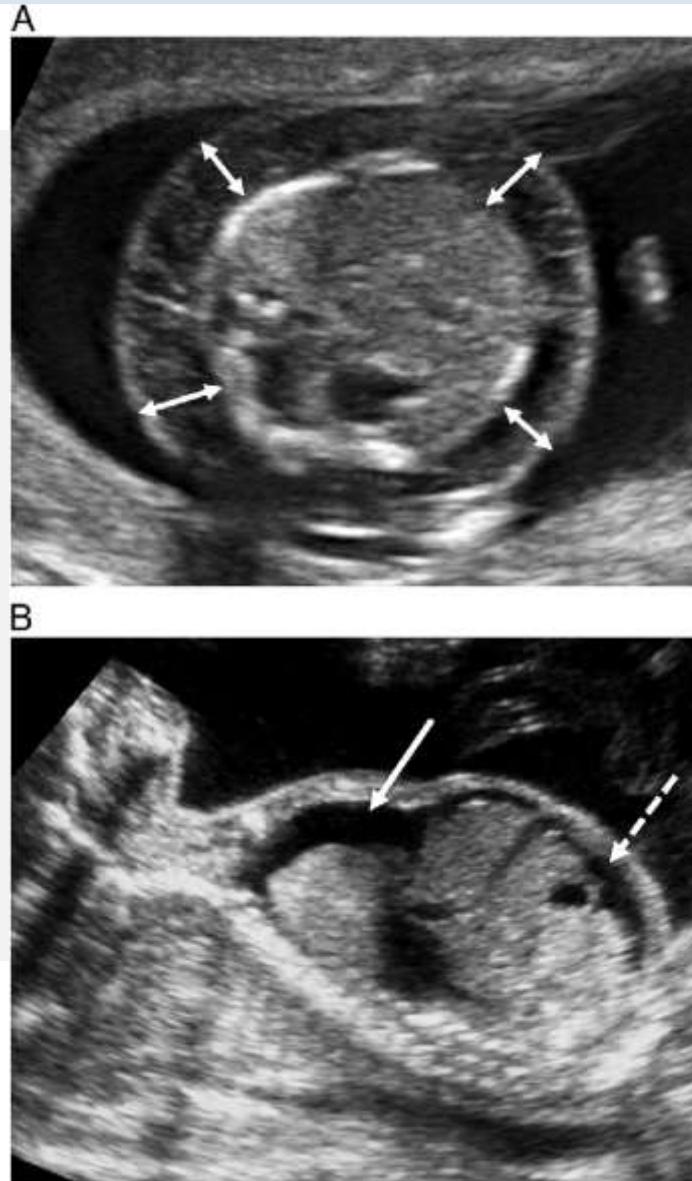

# Fenotipo prenatal

- 1er T TN aumentada. – mediana 8 mm sobre la media normal – Taquicardia 50% - RCF precoz leve
- Higroma quístico 20% corresponde a sd Turner.

# Fenotipo prenatal

- Edema Generalizado
- Derrame pleural leve
- Ascitis
- Riñón en herradura
- Anomalías cardíacas

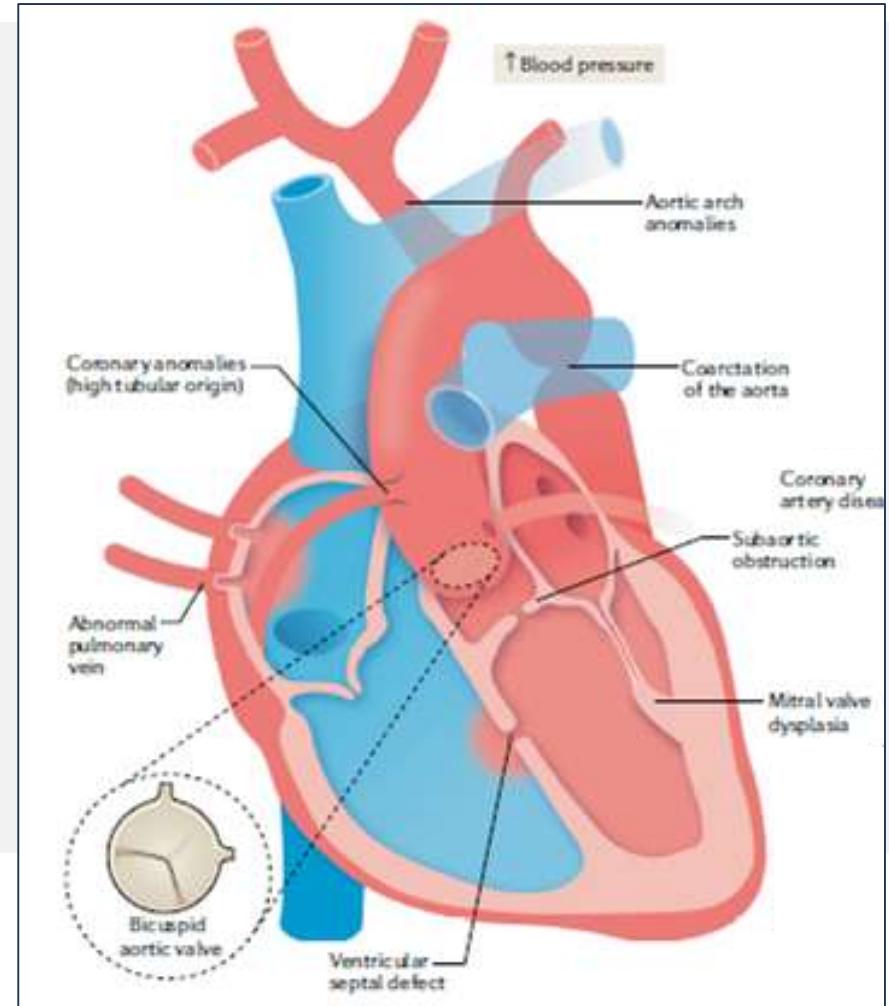

Liau J, Romine L, Korty LA, et al. Simplifying the ultrasound findings of the major fetal chromosomal aneuploidies. *Curr Probl Diagn Radiol.* 2014

# Sd. Turner: Cardiopatías

- Afectan a un 26-50% de las pacientes.
- Principal causa de mortalidad precoz.
- **Defectos congénitos izquierdos**

- Válvula aórtica bicúspide 25%
- Anomalías coronarias
- Drenaje pulmonar anómalo parcial 15-25%
- Anomalías del arco aórtico
- Aorta Bovina
- CoAo
- Displasia Mitral
- SVIH

WILEY AMERICAN JOURNAL OF MEDICAL GENETICS A

## Expanding the fetal phenotype: Prenatal sonographic findings and perinatal outcomes in a cohort of patients with a confirmed 22q11.2 deletion syndrome

- 42 casos con evaluación prenatal y confirmación pre (28/42) o postnatal (14/42).
- 81% delección estándar LCR22A – LCR22D
- 95% presentó una CC
- 90% existían anomalías extracardíacas

TABLE 3 Prenatal extracardiac findings associated with the fetal phenotype of 22q11.2

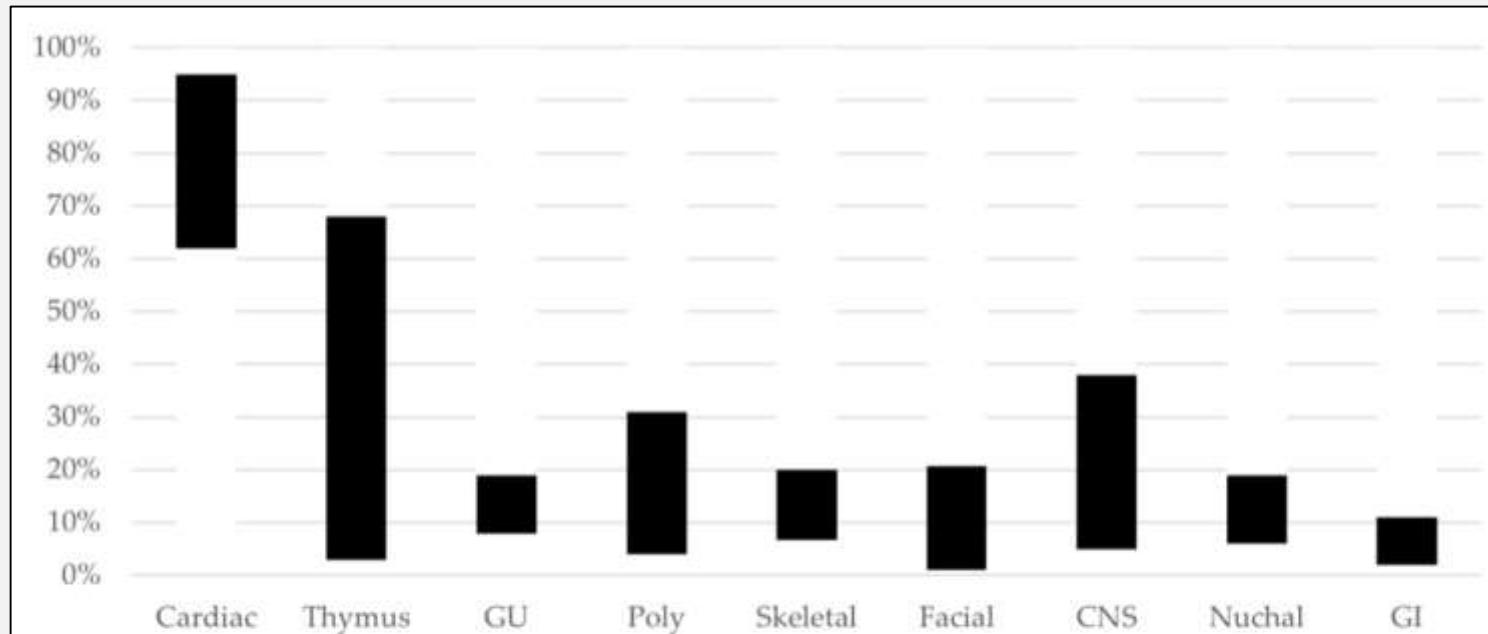

Central nervous system	38% (16/42)
Asymmetric lateral ventricles	31% (5/16)
Prominent cavum septum pellucidum	37.5% (6/16)
Mega cisterna magna	12.5% (2/16)
Neural tube defect	25% (4/16)
Gastrointestinal	9.5% (4/42)
Tracheoesophageal fistula (one with associated imperforate anus)	50% (2/4)
Umbilical cord hernia	25% (1/4)
Umbilical Vein Varix	25% (1/4)
Genitourinary	17% (7/42)
Dilated renal pelvis/pyelectasis	71% (5/7)
Bilateral ureterocele	14% (1/7)
Unilateral multicystic dysplastic kidney	14% (1/7)
Pulmonary	7% (3/42)
Congenital diaphragmatic hernia	67% (2/3)
Congenital cystic adenomatoid malformation	33% (1/3)
Craniofacial dysmorphology	21% (9/42)
Bilateral cleft lip/palate	10% (1/10)
Small ears	60% (6/10)
Micrognathia	10% (1/10)
Hypotelorism	10% (1/10)
Bulbous nose	10% (1/10)
Skeletal	19% (8/42)
Bilateral talipes	25% (2/8)
Anomalous vertebrae	50% (4/8)
Pectus carinatum	12.5% (1/8)
Short long bones	12.5% (1/8)
Small/hypoplastic thymus	26% (11/42)
Polyhydramnios	31% (13/42)
Single umbilical artery	2% (1/42)

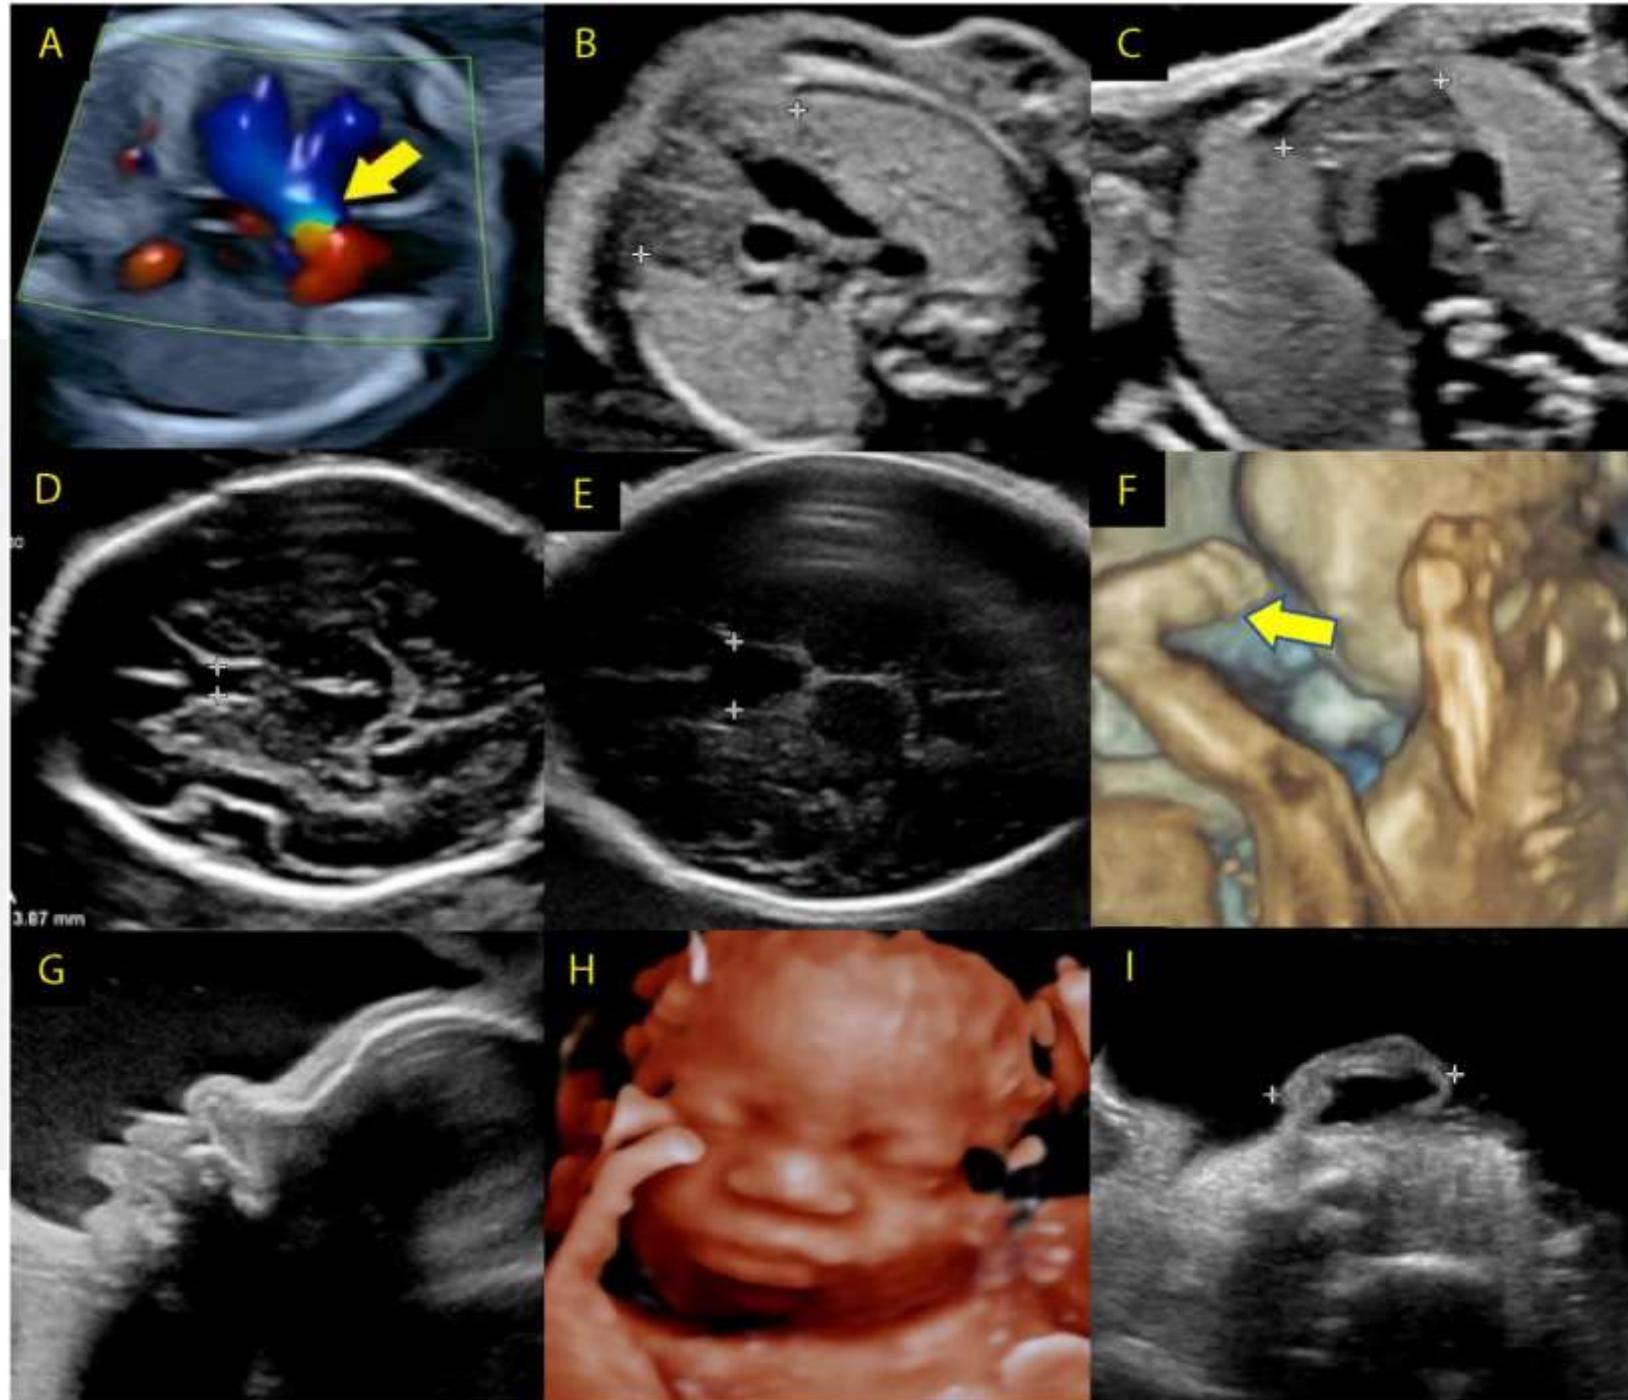

# Fenotipo Prenatal

- Hipoplasia o aplasia del timo S90% E 98% VPP 81,8%
- Anomalías esqueléticas: Talipes equinovaro 20%
- Anomalías craneofaciales: 1-21%. Orejas pequeñas, labio – paladar hendido, hipotelorismo, nariz bulbosa, hueso nasal hipoplásico, micrognatia.
- RCF: riesgo aumentado 6 veces

**Figure 4.** 22q11.2DS Structural Findings. Range of proportion of fetuses with prenatal structural findings in nine categories, later found to have a diagnosis of 22q11.2DS. Based on data from studies with 40 or more patients [6,11,38,39,41]. Legend: GU, genito-urinary tract; Poly: polyhydramnios; CNS: central nervous system, GI: gastrointestinal.

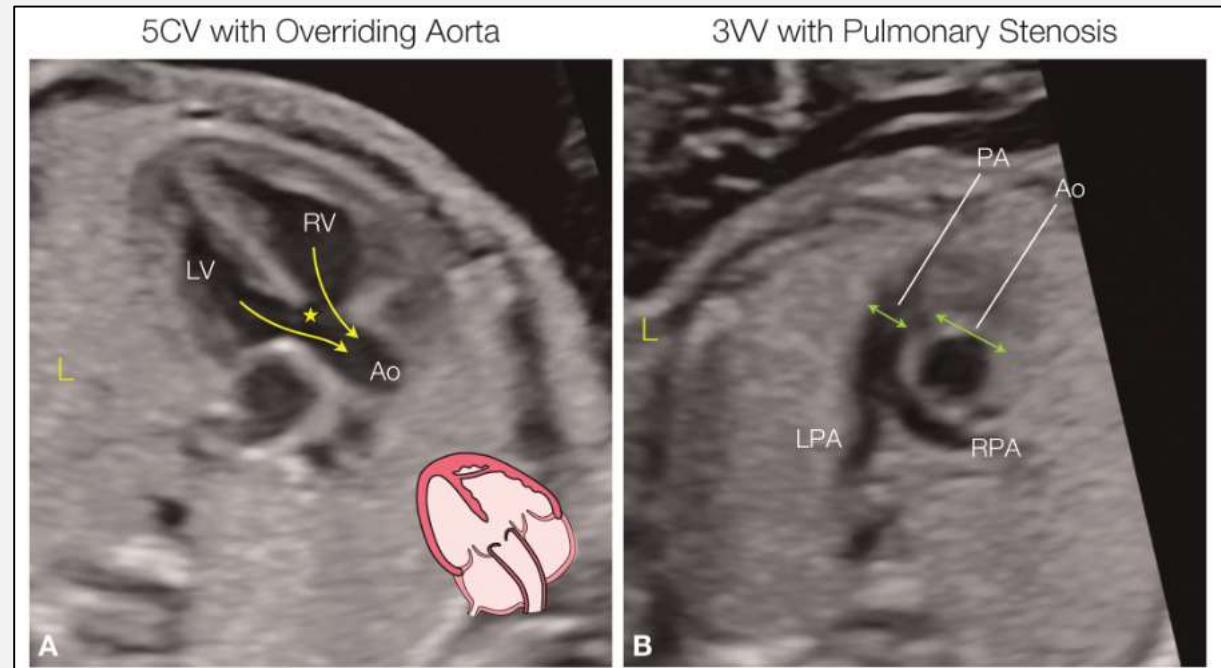

# Síndrome microdeleción 22q11.2: Cardiopatías

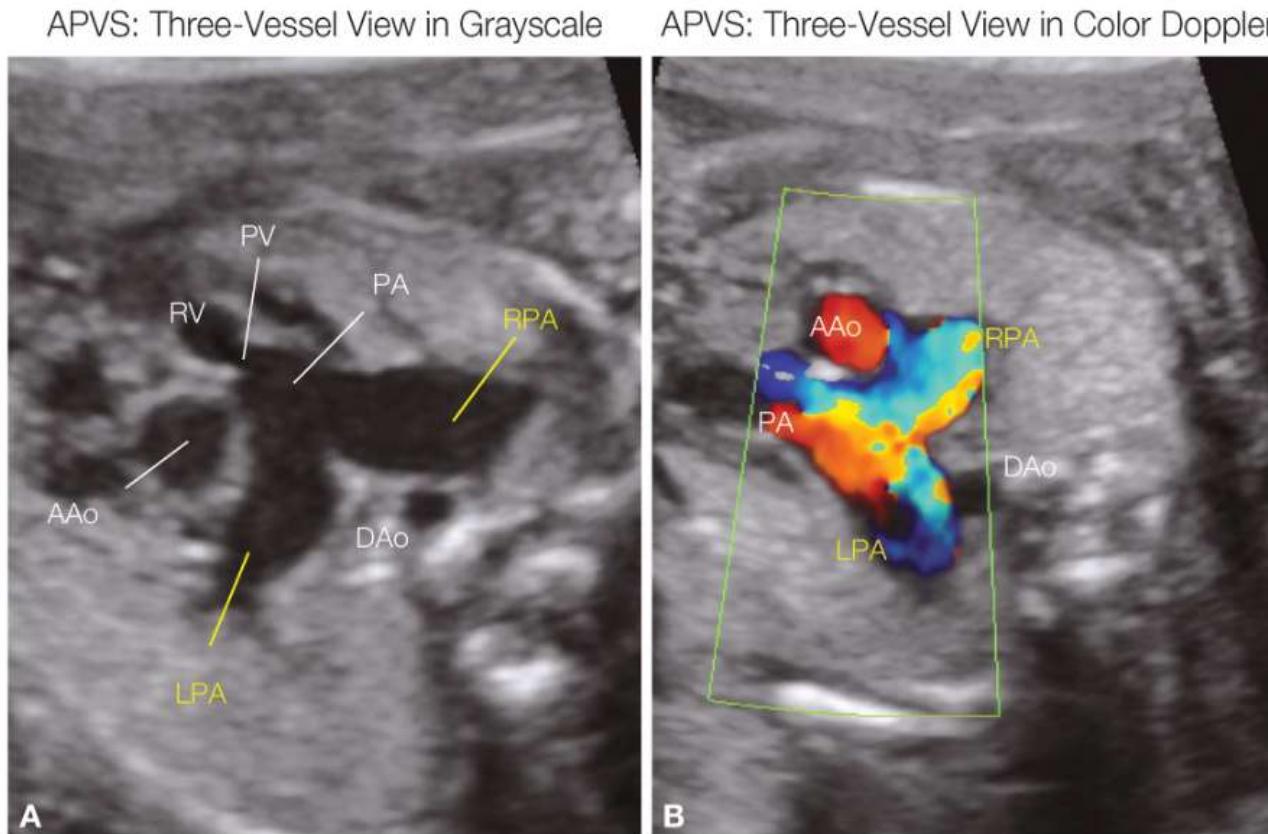

- CC reportadas series prenatales 76-100%.
- Categoría más frecuentemente asociada: defectos conotruncales.

**TABLE 2** Cardiac diagnoses associated with the fetal phenotype of 22q11.2

Tetralogy of Fallot	21% (9/42)
Tetralogy of Fallot with pulmonary atresia	21% (9/42)
Interrupted aortic arch	24% (10/42)
Truncus arteriosus	17% (7/42)
VSD	7% (3/42)
Vascular ring	5% (2/42)
HLHS variant	2% (1/42)

# Síndrome microdeleción 22q11.2: Cardiopatías

**TABLE 2** Frequency of 22q11.2 deletion in cardiac patients<sup>a</sup>

Cardiac malformation	Range of estimated frequency (%)
Interrupted aortic arch type B	50-89
Truncus arteriosus	34-41
Tetralogy of Fallot	8-35
Conoventricular septal defect	7 <sup>b</sup>
Isolated aortic arch anomaly	5-24 <sup>c</sup>
Double outlet right ventricle	<1 <sup>d</sup>
Transposition of the great arteries	<1 <sup>d</sup>

<sup>a</sup>Average frequency presented. In all cases, frequency will be higher in the presence of an aortic arch anomaly as compared to normal left-sided aortic arch with normal branching pattern.

<sup>b</sup>Frequency increases from 5% to 29% with a normal aortic arch versus arch anomaly, respectively.

<sup>c</sup>Reflects findings on published fetal data (~5%) versus single post-natal study (24%).

<sup>d</sup>22q11.2 deletion only seen in cases with aortic arch anomalies in one study.

# Síndrome de Williams

- Prevalencia: 1/7000 RNV
- Etiología: Microdelección de 1,55 - 1,8 Mb en cr. 7q11.23
- Herencia Autosómica Dominante

Desorden multisistémico caracterizado por:  
Alteraciones cardiovasculares y endocrinas  
Características faciales típicas  
Discapacidad intelectual y cognitiva  
Hipersociabilidad

*ELN* – codifica la proteína elastina.  
SNV patogénicas en *ELN* típicamente se asocian con Estenosis Ao Supravalvular

# Fenotipo Prenatal

40 fetos  
24 casos de novo

TABLE 3 Fetal ultrasound features of fetuses with 7q11.23 microdeletion.

	Total (40)	
IUGR	28	70.0%
SFFL/SFB	10	25.0%
Hypoplastic/absent nasal bone	3	7.5%
Increased nuchal translucency	2	5.0%
Cardiovascular defects	12	30.0%
Echogenic intracardiac focus	1	2.5%
Single umbilical artery	2	5.0%
Polyhydramnios	7	17.5%
Abnormality of skull size/shape	3	7.5%
Protruding tongue	6	15.0%
Duodenal atresia	1	2.5%
Small stomach	1	2.5%
Omphalocele	1	2.5%
Urinary tract abnormalities	2	5.0%
Buried penis	2	5.0%
Gyration delay	1	2.5%
Aplasia/Hypoplasia of the corpus callosum	1	2.5%
Fetal choroid plexus cysts	1	2.5%

Abbreviations: IUGR, intrauterine growth retardation; SFFL, short fetal femur length; SLB, short long bone.

# Síndrome de Williams: Cardiopatías

	Patent ductus arteriosus	1-6%
	Tetralogy of Fallot	1-4%
Other cardiovascular	Hypertrophic cardiomyopathy	10-29%
	Arterial aneurysms	<1%

Data obtained from 12 cohorts of patients with a clinically established NS diagnosis, with  $n \geq 20$ : (Burch et al., 1993; Ishizawa, Oho, Dodo, Katori, & Homma, 1996; Marino, Digilio, Toscano, Giannotti, & Dallapiccola, 1999; Bertola et al., 2000; Tartaglia et al., 2002; Sarkozy et al., 2003; Shaw, Kalidas, Crosby, Jeffery, & Patton, 2007; Sznajer et al., 2007; Smpokou, Tworog-Dube, Kucherlapati, & Roberts, 2012; Colquitt & Noonan, 2014; Li, X et al., 2019).

La frecuencia de CC se estima en 50-80%

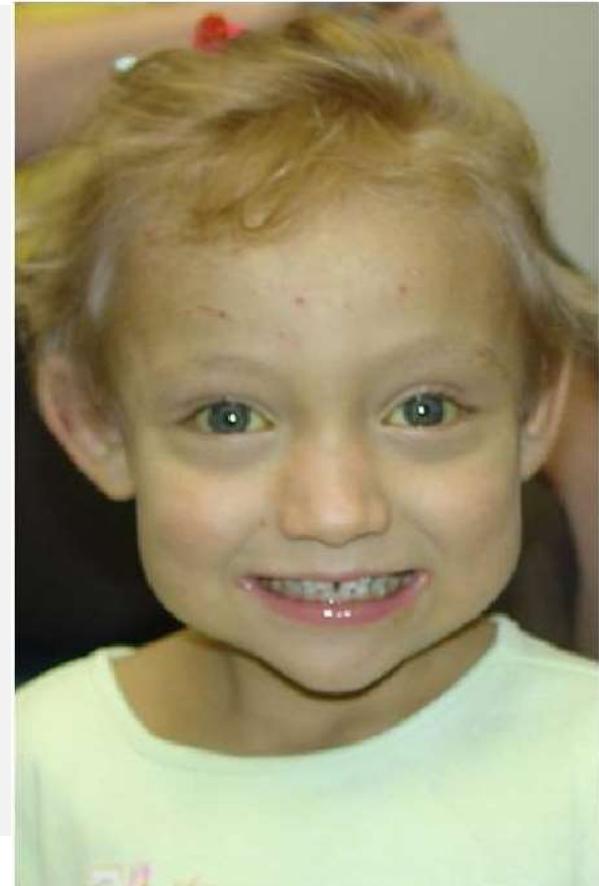

# Síndrome de Alagille

- Prevalencia: 1-30000 a 1 – 50000.
- Etiología: 30-50% variante patogénica heredada – 50-70% de novo en JAG1 o NOTCH2.
- Herencia autosómica dominante con expresión variable.
- Desorden multisistémico: Colestasia, defectos cardíacos (arterias pulmonares), vertebras en mariposa, anomalías oftalmológicas, dismorfias faciales.

**Table 2.** Features of Alagille Syndrome

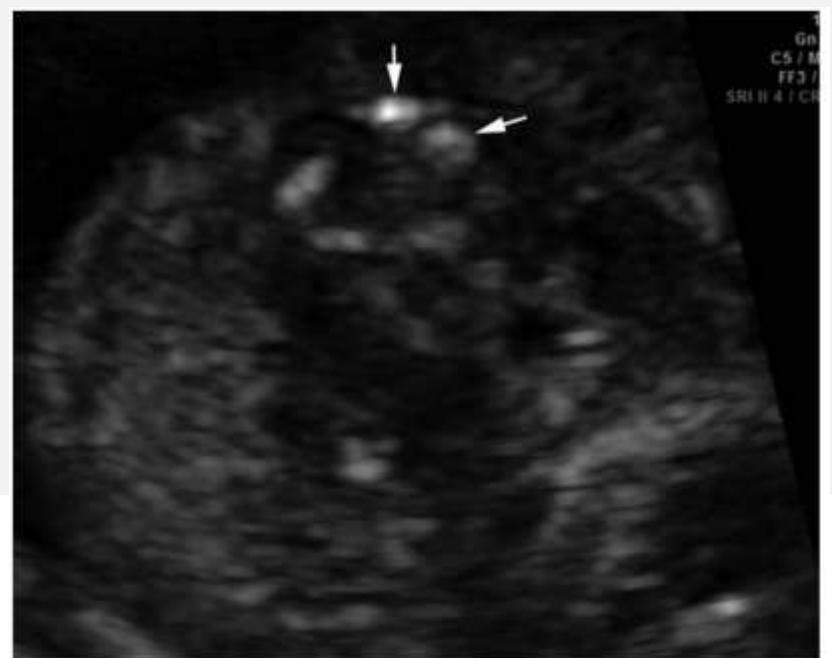

Feature	% of Persons w/Feature	Comment
Hepatic abnormality incl: bile duct paucity; conjugated hyperbilirubinemia; chronic cholestasis characterized by pruritus, xanthomas & fat-soluble vitamin deficiencies; & end-stage liver disease	≤100%	
Cardiac malformation	90%-97%	Most common cardiovascular malformations incl pulmonary stenosis & tetralogy of Fallot
Posterior embryotoxon	78%-89%	
Renal disease	39%	
Vertebral anomalies	33%-93%	
Characteristic facies	77%-97%	

# Fenotipo Prenatal

**TABLE 1**  
**Features of Prenatally Diagnosed Alagille Syndrome**

Reference	Affected Parent	Method of Diagnosis	Gestational Age at Ultrasound	Sonographic Findings	Delivery	Outcome and Other Findings
Witt <sup>2</sup> Antsaklis <sup>1</sup>	Mother Mother	DNA at 12 weeks Post partum physical examination	24 <sup>5/7</sup>	IUGR ascites polyhydramnios	ETOP ETOP	Intrahepatic cholestasis Facies pulmonary stenosis
Albayram <sup>3</sup>	Mother	Prenatal ultrasound	21 <sup>4/7</sup>	Pulmonary stenosis, prominent stomach, IUGR (28 weeks)	35 <sup>6/7</sup> weeks vaginal delivery	Death day of life, 5 postoperative complications-heart surgery
Ghidini <sup>4</sup>	No	Post partum physical examination	21 <sup>5/7</sup>	Thoracic hemivertebrae, T12/L1 kyphoscoliosis, Tetralogy of Fallot Nonvisualized gallbladder	ETOP	Two-vessel cord, paucity of bile ducts, bilobed left lung, fused T12/L1,L2 vertebrae
Current case	Father	Prenatal ultrasound	20 <sup>0/7</sup>	Hemivertebrae, Butterfly vertebrae, two-vessel cord, prominent chin	39 weeks vaginal delivery	Asymmetrical aortic valve

# Síndrome de Alagille: Cardiopatías

- La vasculatura pulmonar es la más frecuentemente comprometida.
- Estenosis Pulmonar 67%.
- Tetralogía de Fallot es el defecto complejo más frecuente 7%-16%.
- Otras:
- VSD, ASD, Estenosis Ao, CoAo.

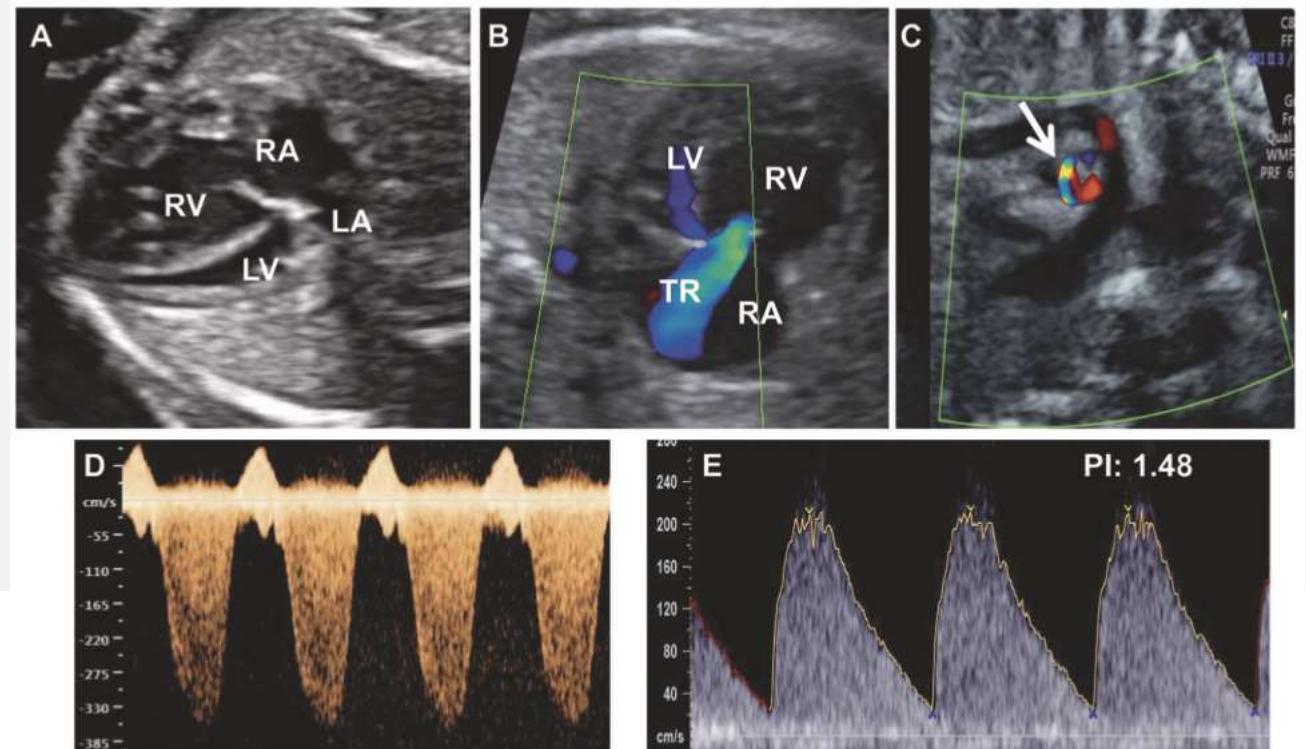

2 casos reportados de constricción idiopática del ductus arterioso.

# Holt Oram – Displasia atrio digital

- Prevalencia 1:100.000
- Etiología: Variantes patogénicas heterocigotas en *TBX5*.
- 85% de Novo
- Herencia Autosómica Dominante

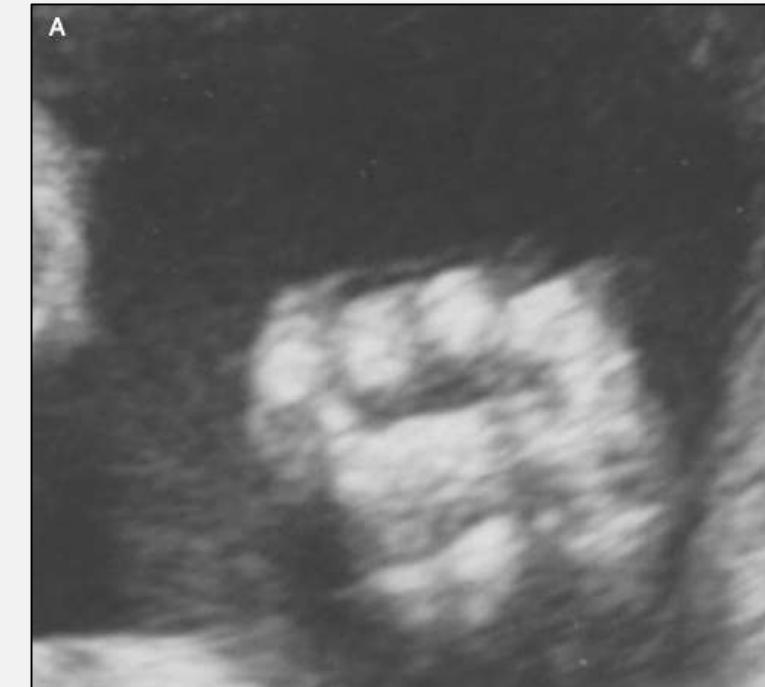

**Table 1.** Molecular Genetic Testing Used in Holt-Oram Syndrome

Gene <sup>1</sup>	Method	Proportion of Probands with a Pathogenic Variant <sup>2</sup> Detectable by Method
<i>TBX5</i>	Sequence analysis <sup>3</sup>	>70% <sup>4</sup>
	Gene-targeted deletion/duplication analysis <sup>5</sup>	<1% <sup>6</sup>

- Malformaciones extremidades superiores, de predominio radial o preaxial
- Anomalías huesos carpales presente en todos los individuos
- Malformaciones cardíacas
- Alteraciones de la conducción cardíaca:  
Bradicardia sinusal, bloqueo AV, FA

Unilateral/bilateral  
Pulgares ausentes/focomelia  
Longitud desigual – aplasia o hipoplasia radio  
Fusión de huesos carpales  
Oposición anormal del pulgar – pulgar 3  
falanges

# Holt Oram – Displasia atrio digital

# Holt Oram: Cardiopatías

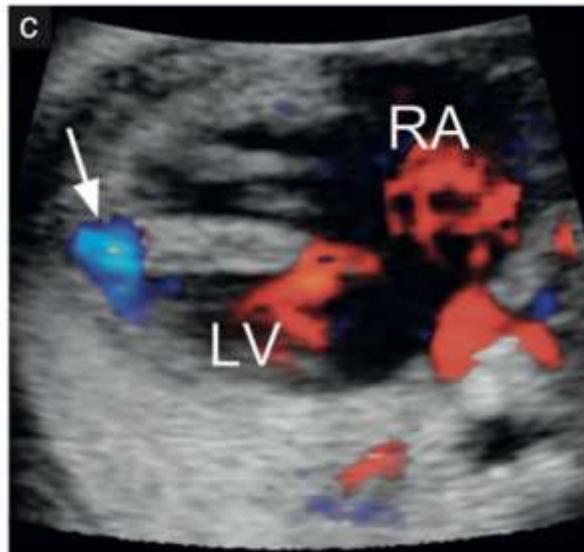

- Prevalencia : 75% - en su mayoría defectos septales

9 casos con diagnóstico prenatal con mutaciones en gen CREBBP

RCF y PHA en 56% (5/9) y 33% (3/9).

# Rubinstein Taiby: Cardiopatías

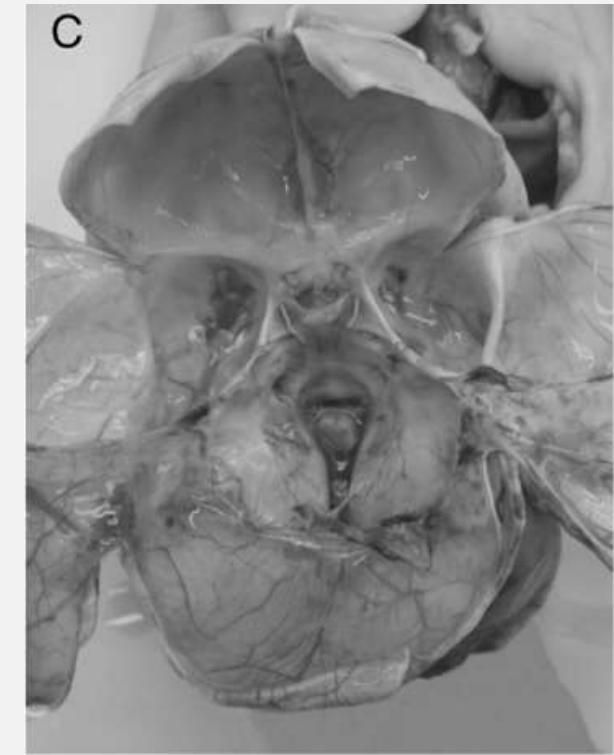

- Cardiopatías congénitas ocurren en aproximadamente 1/3 de los individuos
- ASD, VSD
- DAP
- CoAo
- Estenosis Pulmonar
- Válvula Ao bicúspide
- Estenosis Aórtica
- Anillos vasculares
- Anomalías de la conducción

# Síndrome Hidroletal

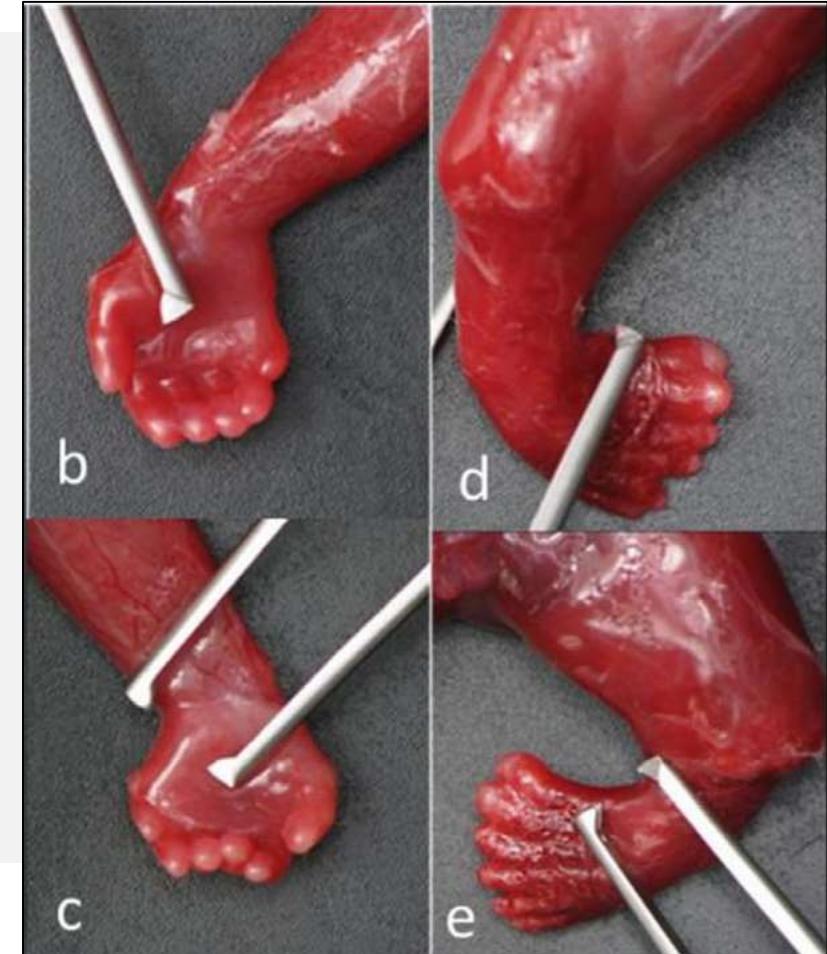

(HLS) (OMIM #236680)

- Síndrome perteneciente al grupo de las ciliopatías
- Polihidroamnios – Hidrocefalia - letalidad
- Presente principalmente en familias de origen finlandés.
- La incidencia anual en Finlandia se estima en 1/20.000.
- El SHL está causado por mutaciones en los genes *HYLS1* (11q24.2) y *KIF7* (15q26.1)
- Herencia autosómica recesiva

# Fenotipo y Cardiopatías

- Micrognatia
- Fisura labiopalatina
- Polidactilia preaxial en manos y postaxial en pies
- Halluz duplex
- Hidrocefalia – agenesia de estructuras de la línea media
- Pie equinovaro
- 50% Defecto del septum AV

V vertebral anomalies, A anorectal anomalies, C cardiac anomalies, TE tracheo-esophageal anomalies, R renal anomalies, L limb anomalies, NS not shown

<sup>a</sup>N = 100 (35%) of the limb anomalies were pre-axial

Component feature	N
Cardiac anomalies	30 (83.33%)
Ventricular septal defect	22
Valvular anomalies	15
Other anomalies	15
Patent foramen ovale	14
Patent ductus arteriosus	13
Cardiomyopathies	12
Atrial septal defect	11
Vascular anomalies	9
Pulmonary anomalies	9
Tetralogy of fallot	6
Aortic anomaly	2
Double outlet right ventricle	2

# Síndrome Alcohólico Fetal

- Disminución de la circunferencia craneana – microcefalia
- Alteraciones cuerpo calloso, cerebelo y ganglios basales
- Defectos cardíacos: Prevalencia 2%
- Defectos septales ventriculares y defectos conotruncales

Alcohol induce la apoptosis de las células de la cresta neural a través de daño oxidativo y disrupción de la señalización de SHH.

Enfermedad	Etiología genética	Herencia	Examen diagnóstico	Cardiopatías asociadas
