REMODELACIÓN CARDIACA EN FETOS CONCEBIDOS POR TECNOLOGIAS DE REPRODUCCIÓN ASISTIDA

Alejandro Rojas Senzano

Programa de formacion medicina materno fetal

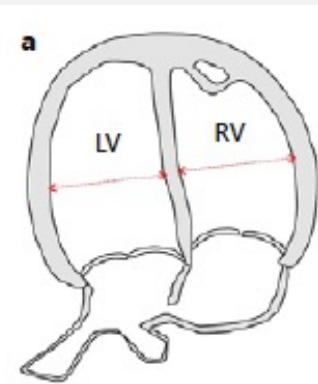

Universidad de Chile

Adaptación cardiaca mediante cambios en la forma, estructura y tamaño para mantener una función optima y eficiente

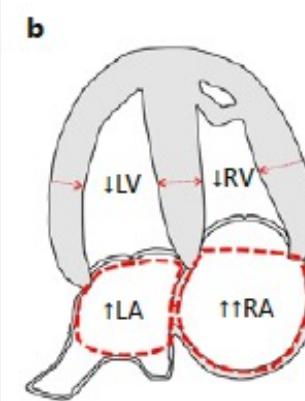

Forma globular

Ventrículos esféricos
Tamaño cardíaco normal

RCF leve

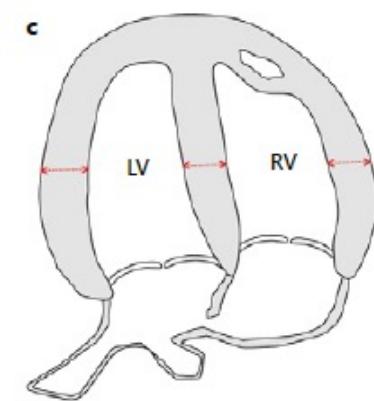

Hipertrofia miocárdica con tamaño normal

Hipertrofia miocardio
Reducción de tamaño ventricular
Dilatación auricular

Estenosis pulmonar severa,
ART

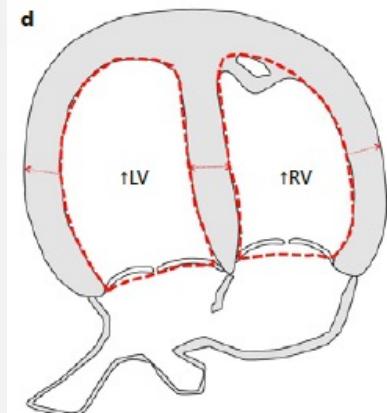

Hipertrofia miocárdica con cardiomegalia

Hipertrofia miocardio
Dilatación ventricular
Disfunción sistólica/diastólica

AZT

Hipertrofia miocárdica excéntrica

Cardiomegalia
Ventrículos dilatados e hipertróficos

RCF severo y precoz

4% de los nacimientos en países desarrollados son producto de ART

8 millones de niños han nacido producto de ART a nivel mundial

**Predisposición a
reprogramación del
sistema cardiovascular**

Remodelado y disfunción cardiaca en útero persiste en vida postnatal

Disfunción cardiaca pero sin cambios en morfología

Aumento de VD y disfunción diastólica en preadolescentes en condiciones de altura

¿Por qué existe diferencia entre los resultados?

Otros factores asociados a remodelación cardiaca

Edad materna
Embarazo múltiple
Prematuridad
Bajo peso al nacer

Diferentes ART

Fertilización in vitro
Inyección intracitoplasmática espermatozoide
Donación de ovocitos
Inseminación intrauterina
Transferencia de embriones congelados

Objetivo: evaluar remodelado cardiaco en fetos concebidos por ART controlando variables confundentes

Prospectivo observacional
Fetos ART vs controles
Evaluación entre 28^{+0} y 32^{+6} semanas
Embarazos únicos sin patologías
Seguimiento a los 0-2 y 6 meses

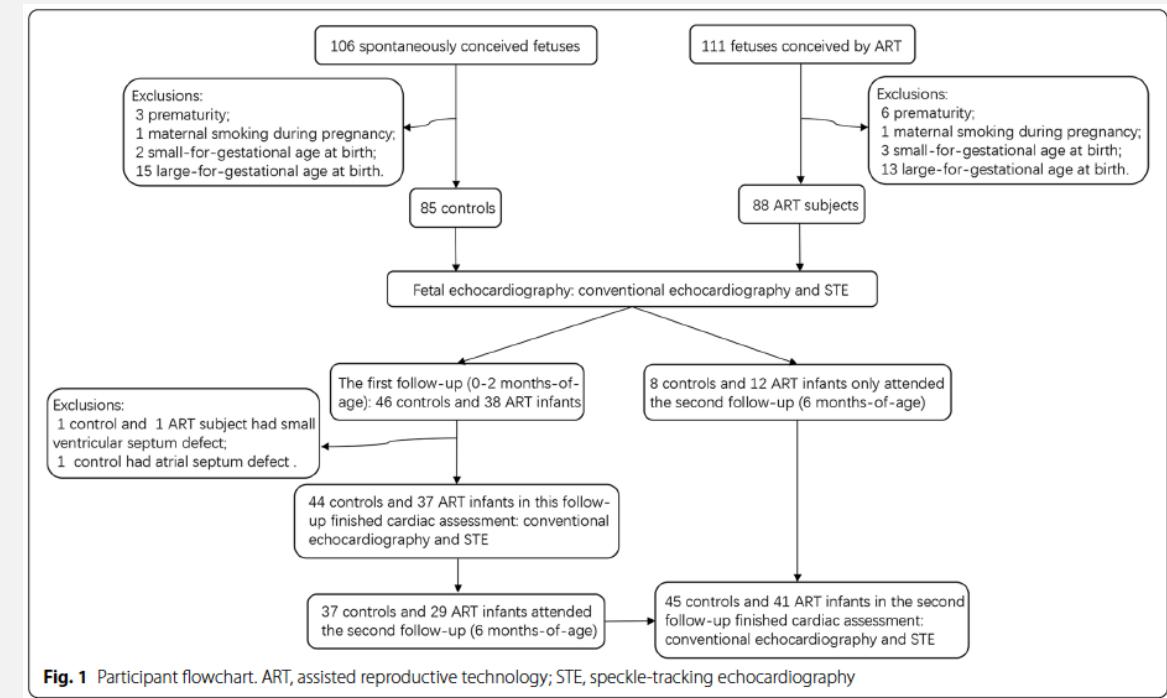

Fig. 1 Participant flowchart. ART, assisted reproductive technology; STE, speckle-tracking echocardiography

Table 1 Baseline and perinatal characteristics of the study population

Characteristics	SC (n = 85)	ART (n = 88)	P

Fetos concebidos por ART poseen remodelado cardiaco que no persiste en la infancia

Bi, W., Xiao, Y., Wang, X. et al. The association between assisted reproductive technology and cardiac remodeling in fetuses and early infants: a prospective cohort study. *BMC Med* 20, 104 (2022). <https://doi.org/10.1186/s12916-022-0303-6>

¿Por qué existe remodelado cardiaco en fetos concebidos por ART?

Respuesta a incremento en sobrecarga de VD

Mecanismos epigenéticos

Metilación en promotor de gen eNOS en aorta

Estrés oxidativo generado por ART

Incremento de ROS intracelular en ratones

Incremento de proteínas asociadas a estrés oxidativo en arteria umbilical

Bi, W., Xiao, Y., Wang, X. et al. The association between assisted reproductive technology and cardiac remodeling in fetuses and early infants: a prospective cohort study. *BMC Med* **20**, 104 (2022). <https://doi.org/10.1186/s12916-022-0303-6>

CERPO

Fetos con **RCF** tienen corazones menos eficientes, **ventrículos mas globulares**, disminución de desplazamiento longitudinal y **alteración de la relajación**

Estos cambios están presentes en el útero y persisten postnatal

Existe **mayor incidencia de RCF** en fetos concebidos por ART

No esta claro cuando del RCF aporta en la remodelación cardiaca en ART

Valenzuela-Alcaraz B, Crispi F, Cruz-Lemini M, et al. Differential effect of assisted reproductive technology and small-for-gestational age on fetal cardiac remodeling. *Ultrasound Obstet Gynecol.* 2017;50(1):63-70. doi:10.1002/uog.16217

Objetivo: evaluar efecto diferencial
de RCF y ART en desarrollo
cardiovascular fetal

Estudio cohorte prospectivo
Ecocardiografía y Doppler entre
28-32 semanas

4 grupos: AGA SC, AGA ART, SGA
SC y SGA ART

El remodelado cardiaco en gemelos concebidos por ART es similar a fetos únicos concebido por ART

Valenzuela-Alcaraz B, Cruz-Lemini M, Rodríguez-López M, et al. Fetal cardiac remodeling in twin pregnancy conceived by assisted reproductive technology. *Ultrasound Obstet Gynecol.* 2018;51(1):94-100.
doi:10.1002/uog.17527

Mecanismos que podrían explicar remodelado cardiaco

Factores intrínsecos a infertilidad paterna/materna

Manipulación de gametos y/o embriones

Condiciones de cultivo

Aumento en el riesgo de insulto

Objetivo: evaluar si remodelado cardiaco esta presente en fetos después de FET y compararlo con no-FET

Estudio prospectivo de 300 embarazos
 100 SC, 100 FET y 100 no-FET
 Se excluyó ovodonación, DGP y anomalías estructurales y cromosómicas
 Evaluación ecocardiográfica a las 28-33 semanas

Male factor	56	44	
Previous failed ET cycles (N)	0.7 (±0.9)	0.5 (±0.9)	
Oocytes retrieved (N)	13 (10–17)†	8 (6–10)	
Embryos obtained (N)†	9 (6–11)†	5 (3–6)	
Transferred embryos (N)	1.8 (±0.6)	1.9 (±0.4)	
ET at cleavage stage (%)	72	82	

Table III Feto-placental data at scan.

	SC (n = 100)	FET (n = 100)	Fresh ET (n = 100)	P-value
Gestational age (weeks, days)	30,0 (28,5–33,6)	31,1 (29,1–32,6)	30,3 (29,4–31,5)	0.645
Estimated fetal weight (g)	1508 (1314–2028)	1652 (1415–1968)	1570 (1424–1895)	0.472
Estimated fetal weight centile	48 (22–80)	59 (18–79)	56 (22–75)	0.919
Cerebroplacental ratio (z-score)	−0.24 (± 1.07)	−0.09 (± 0.97)	0.03 (± 1.09)	0.223
Ductus venosus PI (z-score)	−0.49 (−1.15–0.09)	−0.80 (−1.43–0.12)	−0.53 (−1.06–0.14)	0.329

Data are mean (\pm SD) or median (interquartile range).

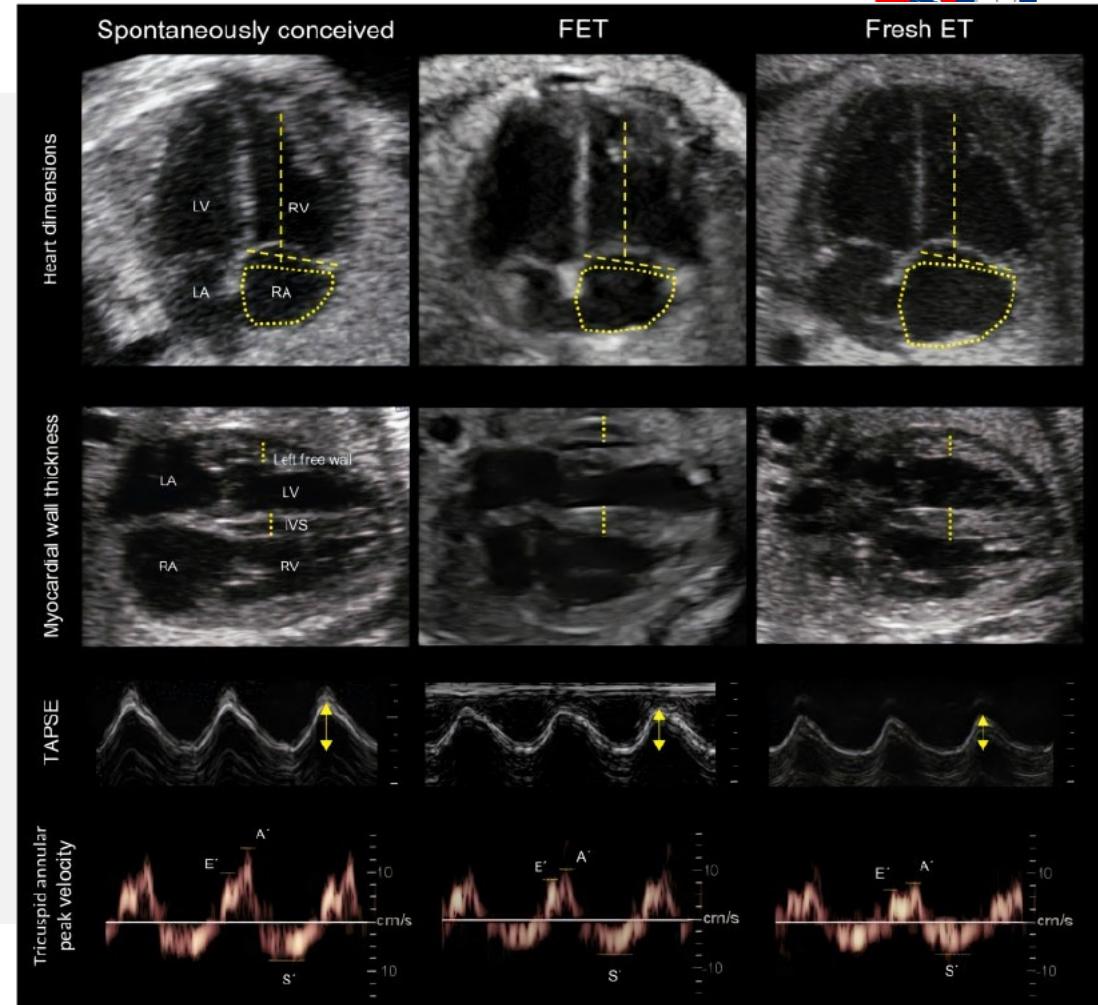

SC, spontaneously conceived pregnancies; FET, frozen embryo transfer; ET, embryo transfer, PI, pulsatility index.

Tanto FET como fresh ET mostraron signos significativos de remodelación y disfunción cardiaca

↑ tamaño cardiaco, ↑ grosor miocárdico y ventrículos mas esféricos

Menor FE y SF de VI y signos de disfunción diastólica

Fetos derivados de FET mostraron cambios mas leves que fresh-ET

¿Por qué la diferencia?

Mejor selección de embriones

Menor exposición a hiperestimulación ovárica

Otras complicaciones que afectan remodelación cardiaca

Summary of recommendations		
Number	Recommendations	GRADE
1	We suggest that genetic counseling be offered to all patients undergoing or who have undergone IVF, with or without ICSI.	2C
2	Regardless of whether PGT has been performed, we recommend that all patients who have achieved pregnancy with IVF be offered the options of prenatal genetic screening and diagnostic testing via chorionic villus sampling or amniocentesis.	1C
3	We recommend that the accuracy of first-trimester screening tests, including cfDNA for aneuploidy, be discussed with patients undergoing or who have undergone IVF.	1A
4	When multifetal pregnancies do occur, we recommend that counseling be offered regarding the option of multifetal pregnancy reduction.	1C
5	We recommend that a detailed obstetrical ultrasound examination (CPT 76811) be performed for pregnancies achieved with IVF and ICSI.	1B
6	We suggest that fetal echocardiography be offered to patients with pregnancies achieved with IVF and ICSI.	2C
7	We recommend that a careful examination of the placental location, placental shape, and cord insertion site be performed at the time of the detailed fetal anatomy ultrasound, including evaluation for vasa previa.	1B
8	Although visualization of the cervix at the 18 0/7 to 22 6/7 weeks of gestation anatomy assessment with either a transabdominal or endovaginal approach is recommended, we do not recommend serial cervical length assessment as a routine practice for pregnancies achieved with IVF.	1C
9	We suggest that an assessment of fetal growth be performed in the third trimester for pregnancies achieved with IVF; however, serial growth ultrasounds are not recommended for the sole indication of IVF.	2B
10	We do not recommend low-dose aspirin for patients with pregnancies achieved with IVF as the sole indication for preeclampsia prophylaxis; however, if one or more additional risk factors are present, low-dose aspirin is recommended.	1B
11	Given the increased risk for stillbirth, we suggest weekly antenatal fetal surveillance beginning by 36 0/7 weeks of gestation for pregnancies achieved with IVF.	2C
12	In the absence of studies focused specifically on timing of delivery for pregnancies achieved with IVF, we recommend shared decision-making between patients and healthcare providers when considering induction of labor at 39 weeks of gestation.	1C

Society for Maternal-Fetal Medicine. SMFM Consult Series #60: Management of pregnancies resulting from in vitro fertilization. Am J Obstet Gynecol 2022.

La remodelación cardiaca fetal es un fenómeno ya asociado a varios condiciones prenatales

El embarazo por ART provoca remodelado cardíaco fetal

El remodelado se caracteriza por mayor tamaño auricular, ventrículos más globulares y engrosados. Además de signos de disfunción sistólica/diastólica

Al parecer este remodelado no persiste en la vida postnatal, pero se requieren mayores estudios para establecer su verdadero impacto
